

This plot looks great.
Could you help me reproduce
it in Python/R/LaTeX/...
script?

Aligned Visual Semantic

```
Title := Ecological Metrics
Plot_Color := '#DCE3EF'
Category := "Carbon
Sequestration", "Biodiversity"
, "Water Quality", "Soil
Health", "Climate Adaptation"
Values := 50, 80, 60, 40, 75
Colors := '#8A2BE2', '#F0F8FF',
'#00BFFF', '#D2691E', '#1E90FF'
.....
```

LaTeX Script

```
\begin{tikzpicture}
\def\N{4}
\begin{axis}[
title = {Title},
axis background/.style
={fill=Plot_Color},
xticklabels = {Category},
ybar, xtick={0,...,\N},
ymin=0]
\foreach \i in {0,...,\N} {
\addplot+[fill=Colors[\i]]
coordinates {(\i, Values[\i])};}
\end{axis}
\end{tikzpicture}
```

Python Script

R Script

```
fig, ax = plt.subplots()
ax.bar(Category, Values,
color=Colors)
ax.set_title(Title)
ax.set_facecolor(Plot_Color)
plt.show()

df <- data.frame(x = Category, y = Values,
fill = Colors)
ggplot(df, aes(x = x, y = y, fill = fill)) +
geom_bar(stat = "identity") +
scale_fill_identity() + labs(title = Title) +
theme(panel.background = element_rect(fill =
Plot_Color))
```
